

# Lantana

Hummingbirds are especially attracted to bright red, purple, white, pink, orange and blue. Two favorites are bee balm and cardinal flower. However, these two plants do not have a long bloom life, so adding other nectar-bearing flowers which bloom at different times or have longer bloom periods will ensure a longer feeding season.

**Lantana** (*Lantana camara*) and **Trailing Lantana** (*Lantana montevidensis*) attract all types of butterflies and hummingbirds and have a long bloom period. Lantana comes in a variety of colors including *red*, *orange*, *yellow*, *purple* or *blue* and white blooms. Lantanas grow well in zone 8 and higher. Nashville is zone 8a (10°F – 15°F).
